Art Unit: 3729

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-6 and 13-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Agatsuma et al (Patent No. 4,161,062).

Agatsuma et al teach a method of producing hollow superconducting cables by providing grooves on the outer periphery of a hollow or copper conductor or strip. Superconductive core wires are soldered to the strip to enable a strong mechanical, electrical and thermal bond therebetween. It would have been obvious if in fact Agatsuma et al fails to teach that the strip copper is formed about the core wires. As applied to claim 2 Agatsuma et al teach a groove 3 in the hollow conductor 1. It is held to have been obvious to form this element (or U-shaped groove). Forming longitudinal metal members is held to be old in this art and hence to have been obvious. As applied to claim 3 again bonding a longitudinal metal strip (or hollow conductor) onto conductors by means of a molten solder bath and then solidifying the bond by cooling is held to be old and hence obvious. The limitations recited in Claim 4 is at least taught by Figures 3 and 5 (and the corresponding disclosures of these Figures) of Agatsuma et al. With respect to Claim 5 it is held to be mere design choice to encase the core wires between 180-360 degress since Applicants do not provide any specific purpose therefore nor solve any particular problem thereby.

Application/Control Number: 10/782,408 Page 3

Art Unit: 3729

Claims 7-12 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to C. J. Arbes whose telephone number is 571-272-4563. The examiner can normally be reached on M, T, R and F from 8 to 6.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, P. Vo, can be reached on 571-272- 4690. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
